

Tremco Roofing and Building Maintenance Response to KWTV

Tremco Roofing and Building Maintenance, a division of Tremco Incorporated, is pleased to provide information concerning the quality roofing products and services it has provided in connection with school roofing projects within the Tulsa School District. In each of the projects on which Tremco roofing systems have been installed on Tulsa Schools, we have supplied our products to local Oklahoma roofing contractors that have competed successfully in public bid environments for the opportunity to deliver cost-effective, long-term roofing solutions. We continue to be proud of the results we have helped to deliver to the District, including continued support through our roofing warranty and maintenance programs. Thank you for the opportunity to provide information in this regard.

With roofs averaging approximately 51 years of age, each of Tulsa's school roofing projects requires a unique solution to deal with complex roof conditions and layouts. The solutions we help to deliver and support through our product offerings include, among other things, transitional counter flashings; tapered or concrete insulation as part of re-grading formerly flat roofs to assure good drainage to eliminate roof water collection and damage; extensive metal work like installation of parapet caps to protect exterior walls, and warranties and after-project maintenance and repair, as referenced above.

Roofing costs on particular projects reflect the unique conditions which each building presents. But in each instance these costs should also cover the delivery of products and services that achieve long-term roof performance, regular maintenance and durability. If a low-cost roof system fails early, is improperly installed, is inadequately maintained, or requires costly repairs throughout its life cycle, the seemingly low cost option can quickly become the most expensive in the long-term.

Among the most important factors for school districts – in fact, for all roofing customers – are long-term performance achieved through regular roof inspection, service and repairs. Tremco Roofing provides all these protections within the price of the systems and warranties it offers on each roofing project. In fact, on each of the Tulsa School District roofing projects on which new Tremco roofing systems have been installed, our 10-year warranty with optional five and ten-year renewal periods covers all Tremco Roofing roof inspection and maintenance services as part of the contractor bid price, without further cost to the District.

Tremco Incorporated

3735 Green Road • Beachwood, Ohio 44122 • 216-292-5000

Please also be aware that like all of the expenditures that are part of the District's voter-approved capital improvement program, roofing allocations are separate from the annual operating expense of the District and do not affect the budget for current educational services.

About Tremco Roofing and Building Maintenance

Headquartered in Beachwood, Ohio and in business since 1928, Tremco Incorporated has been providing customers with building envelope and weatherproofing solutions for more than eighty (80) years. Through our Roofing and Building Maintenance Division, Tremco continues to help manage building life cycles for customers in education, healthcare, government, manufacturing and many other industries. We also continue to work closely with our subsidiary WTI, which provides both general contracting and roofing-related services.
